

## Ball Release PRO

**Art. nr. 1514047**

The new and improved design for Malmsten Ball Release PRO!

A new revised ball release was designed in cooperation with World Aquatics. The idea is to highlight the ball at the competition start. The ball is showcased much higher above the water's surface.

It is more attractive, the ball ends up higher above the water surface, but it only takes up a little space under the water during the matches as it does not have long attachments below the surface.

Attention: In order to use this release system, two anchors need to be installed on the bottom of the pool and one anchor installed on the pool deck.

Once the Ball Release is pulled down, it only stands 350 mm from the bottom surface.

Ball Release PRO has no metal parts that can rust. The acrylic is a shatter-resistant alternative to glass and perfect for the pool environment.

### Advantages:

- Official World Aquatics
- Fits all water polo ball sizes
- Easy to install and use
- Perfect material for pool environment

### Product Information:

#### Material:

EVA foam and PMMA- is also known as acrylic glass  
Retainer cord : 22 m Polythene Rope Ø 6 mm

**Measurements:** 343 x 286 x 286 mm

#### Note:

22 m retainer cord included  
Arrives in a flat package with easy-to-use installation instructions

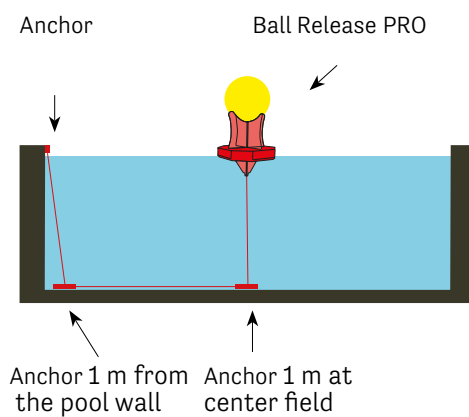

Sold per unit

*Selected When it Counts*

## Technical Information

For installation and use:

- 2 anchors need to be installed at the bottom of the pool
- 1 anchor needs to be installed on the pool deck

If the pool is missing anchors for installation, we recommend the following products (sold separately):

Underwater Eyelet (art. nr. 1514008)

For permanent installation, Wall/Bottom Anchor (art. nr. 2010003)
