

Backstroke Start Device - FINA Compliance

Art. No. 1910054

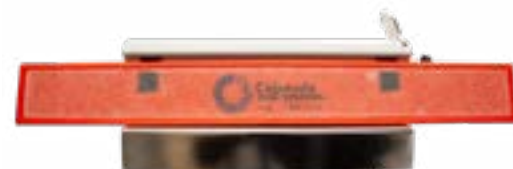

The backstroke start device from Colorado Time Systems is used during training and competition as a way for swimmers to get an explosive start without slipping.

The versatile design allows the device to attach to nearly any starting block with either straps or anchors. Once in place, pull down the backstroke wedge to the desired location on the pool wall and lock into place.

Once the swimmer has left the wall, the backstroke start device will automatically retract up and out of the water until the next swimmer sets up for the next race without interfering with turns and finishes.

Features:

- Anti-slip foot wedge
- Easy to set up
- Automatically retracts up and out of the water
- Robust construction
- Adapts to most starting blocks
- Red wedge for enhanced visibility under water
- FINA compliant

Product Information

Red wedge for enhanced visibility under water.

Dimensions: 65cm x 8cm and features a 10° angle for foot placement at the race start.

Short: Fits most starting blocks such as Malmsten Starting Blocks.

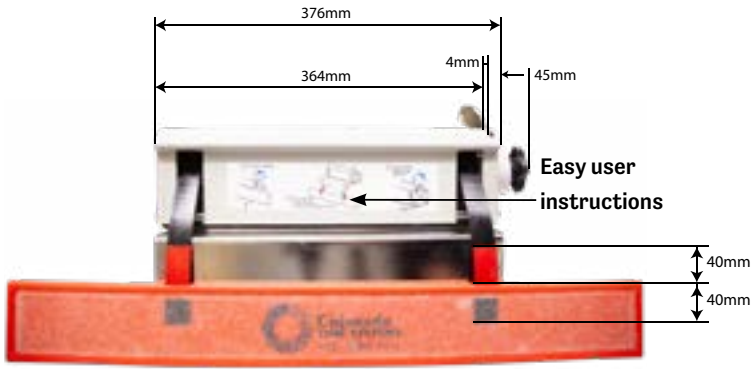

Long: For starting blocks where there is not enough space at the front edge.

Anchoring straps included.

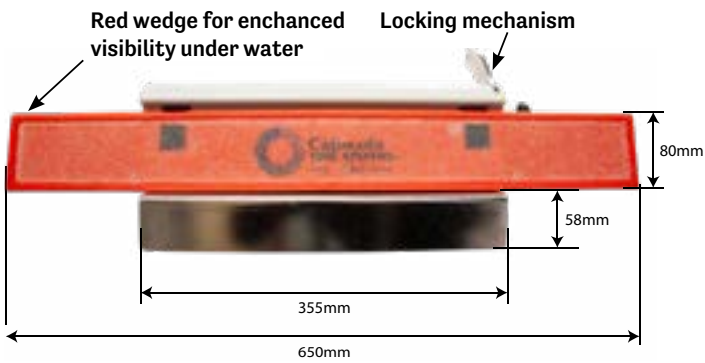

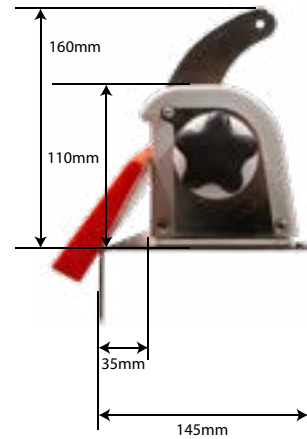

Designed in accordance with FINA FR 2.10:

- Adjustable to 4cm above or below water level
- Ledge measures 655mm and is 80mm in height with 20mm width and 10° of slope.
